

## **Title: Developing Agent Problems**

**EX. NO : 02**

Name: Parth Langalia

**DATE : 01-02-2023**

**Reg No. : RA2011033010033**

### **AIM :**

Developing agent problems for real world problems.

### **PSEUDO CODE :**

Initialize:

1. Color first vertex with first color.

Loop for remaining  $V-1$  vertices.:

1. Consider the currently picked vertex and color it with the lowest numbered color that has not been used on any previously colored vertices adjacent to it.
2. If all previously used colors appear on vertices adjacent to  $v$ , assign a new color to it.
3. Repeat the following for all edges.
4. Index of color used is the chromatic number.

**PROGRAM :**

td Online Compiler - C/C++, Java, Python

techiedelight.com/compiler/

Techie Delight

C++ (GCC 9.2.0)

main.cpp

```
1 #include <iostream>
2 #include <vector>
3 #include <unordered_map>
4 #include <set>
5 using namespace std;
6
7 // Data structure to store a graph edge
8 struct Edge {
9     int src, dest;
10 };
11
12 class Graph
13 {
14 public:
15     // a vector of vectors to represent an adjacency list
16     vector<vector<int>> adjlist;
17
18     // Constructor
19     Graph(vector<Edge> const &edges, int n)
20     {
21         // resize the vector to hold 'n' elements of type 'vector<int>'
22         adjlist.resize(n);
23
24         // add edges to the undirected graph
25         for (Edge edge: edges)
26         {
27             int src = edge.src;
28             int dest = edge.dest;
29
30             adjlist[src].push_back(dest);
31             adjlist[dest].push_back(src);
32         }
33     }
34 };
35
36 // Add more colors for graphs with many more vertices
37 string color[] =
38 {
39     "", "BLUE", "GREEN", "RED", "YELLOW", "ORANGE", "PINK",
40     "BLACK", "BROWN", "WHITE", "PURPLE", "VIOLET"
41 };
42
43 // function to assign colors to vertices of a graph
44 void colorGraph(Graph const &graph, int n)
45 {
46     // keep track of the color assigned to each vertex
47     unordered_map<int, int> result;
48
49     // assign a color to vertex one by one
50     for (int u = 0; u < n; u++)
51     {
52         // set to store the color of adjacent vertices of 'u'
53         set<int> assigned;
54
55         // check colors of adjacent vertices of 'u' and store them in a set
56         for (int i: graph.adjlist[u])
57         {
58             if (result[i] != -1)
```

Manual colouring

assigned colours are as follows :

vertex : 0	colour : 1
vertex : 1	colour : 2
vertex : 2	colour : 2
vertex : 3	colour : 1
vertex : 4	colour : 2
vertex : 5	colour : 3
vertex : 6	colour : 1

[R:1, G:2, B:3]

chromatic Number: 3.

Output:

state space tree:

## **OUTPUT :**

## **RESULT :**

Edge, vertex and face coloring problem which are together known as graph coloring problem solved and visualized in an optimized way using greedy approach.
